

THE NETSECURE SERVICES

NetAccess has been a leader in providing Internet solutions to business since 1993. Whether it is for your home office or the corporate head office, NetAccess provides a complete range of high performance Internet services designed to meet the needs of business in a competitive and rapidly changing technology environment. In response to the need for efficient and safe communication over the Internet, and in response to the need for businesses to protect critical data, NetAccess offers clients its NetSecure services.

The NetSecure family of services, NetShield, NetBackup, and NetFilter have been designed to help clients increase their productive use of the Internet and protect critical business data. NetShield provides clients with a very effective first line of defense against the related problems of Spam and viruses transmitted through email. NetBackup provides customers with a simple and effective way to protect their critical business data from loss, and provides a wide range of user and storage packages to fit any client needs. NetFilter enables businesses to manage which sites are accessed from the company network and provides a flexible and sophisticated level of Internet access management.

THE NETSHIELD SERVICES

Protects your email from Spam and viruses as well as allowing for web access to email. The NetShield Services offers such features as: an industry leading corporate mail server dedicated exclusively to the new email services, *virus scanning* of both received AND sent email using McAfee virus signatures and advanced *Spam filtering*.

THE NETFILTER SERVICES

More info coming soon...

THE NETBACKUP SERVICES

NetAccess understands the need of business to have secure and reliable access to critical business data at all times. With our NetBackup service we offer clients a comprehensive and scalable data protection service to minimize the risk of data loss and downtime.

NetBackup provides a simple and secure method to backup your important computer files to a remote site, and gives you the peace of mind to know your critical business files are secure.

THE NETSHIELD SERVICES

NetAccess is widely recognized for the interest it takes in its clients, and has established a reputation for service suited to client needs. NetAccess has made a significant investment in specialized mail servers and industry leading email software that provides advanced tools to help you manage your email.

The NetShield Services offers such features as: *virus scanning* of both received AND sent email using McAfee virus signatures and advanced *Spam filtering*. A set of over 800 rules is used to evaluate the content of email and determine whether it is Spam. A database of over 50,000 virus signatures that is updated daily, guards against virus infection.

SINGLE NETSHIELD

Clients with personal accounts at NetAccess can benefit from the full set of NetShield features for a small yearly fee. A web interface allows for checking email from any Internet connection. You are able to check email from a friend's house, while traveling, etc. by easily opening a web page from any browser. From \$19.95/year.

MULTI NETSHIELD

Companies who have their domains with NetAccess can have all their mailboxes protected using the new NetShield server. An additional feature of the service is a web interface that allows employees to check their email using any internet connection. Email can be checked while at home or out of the office. Various packages are available to suit any size office. Multi NetShield provides an extremely cost effective means of protecting all mailboxes. From \$9.95/month.

SERVER NETSHIELD

Corporate clients who have their own mail server can use NetShield to scan their mail and filter viruses and Spam by having their email pass through NetAccess on its way to the corporate mail server. This process is totally transparent and adds only milliseconds to the delivery time. NetShield also works seamlessly with standard corporate anti-virus software that clients should use internally, and eliminates the administrative overhead of dealing with Spam. An additional benefit is the ability to isolate the corporate email server from the Internet. It can be configured to only accept connections from the NetAccess NetShield mail server, effectively removing the corporate mail server from direct exposure to the Internet. From \$49.95/month.

THE NETBACKUP SERVICES

Backups are one of those tasks that everyone knows should be done regularly, but few take the time to do properly. In the event of data loss through human error, technical failure, theft, or some form of natural disaster, few businesses have the confidence that their critical data can be restored.

NetAccess understands the need of business to have secure and reliable access to critical business data at all times. With our NetBackup service we offer clients a comprehensive and scalable data protection service to minimize the risk of data loss and downtime.

NetBackup provides a simple and secure method to backup your important computer files to a remote site, and gives you the peace of mind to know your critical business files are secure.

NetBackup uses your existing Internet connection to maintain a copy of your important files at a remote location. Backups are easily accessible and can be scheduled to automatically run during off-hours. Sophisticated compression and encryption methods are used to provide fast and secure backups. NetBackup will enable you to easily recover from unexpected losses.

NetBackup offers a wide range of options to fit any size office, and gives the flexibility to mix-and-match packages. Choose one user package and one storage package, to suit your individual needs.

NETBACKUP USER PACKAGES
